

InSpire EDC

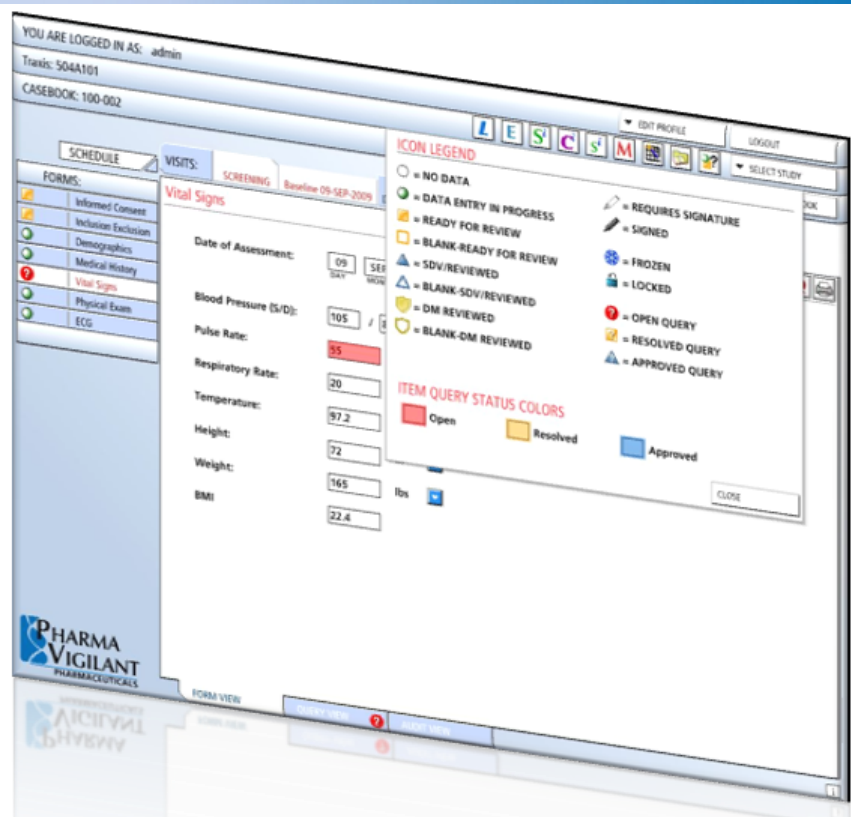

REVOLUTIONIZE THE WAY YOUR TRIAL IS CONDUCTED

InSpire EDC empowers sponsors and sites to enter and review data with minimal training. InSpire incorporates industry-leading features into its fast, secure, and user-friendly interface. In addition to the functionality found in other leading products in the marketplace — such as complex edit checks, dynamic forms, and dynamic visits — InSpire integrates randomization, AutoCoding, lab import utilities and automatic generation of MedWatch or CIOMS forms. Additionally, our safety system eliminates the need for a separate SAE system, and data can be collected directly from subjects, eliminating the need for a separate ePRO solution.

MULTIPLE FEATURES, ONE SYSTEM

- ◆ Auto coding
- ◆ Randomization
- ◆ Common AE/SAE database
- ◆ Automatic notification of SAEs
- ◆ Clinical Data Warehouse (I-Warehouse)
- ◆ Pre-populated MedWatch or CIOMS forms
- ◆ Lab imports
- ◆ Flow control
- ◆ Password-protected portal
- ◆ Custom Design

IMMEDIATE VISIBILITY INTO STUDY METRICS

InSpire's integrated approach eliminates the additional costs of separate systems and the time and cost of reconciliation across databases. It also ensures a fast study start up and data lock by providing unique, role-specific work flow tools. This is enhanced by customized study tabs with up-to-the-minute information on enrollment, data entry, data monitoring, and sign off.

WEB-BASED SOLUTION

InSpire can be accessed through PharmaVigilant's custom branded web portal, and is available in multiple languages. InSpire's web-enabled interface supports all versions of Mozilla Firefox, Internet Explorer, and Safari web browsers and is 21 CFR Part 11 compliant.
